

THEMATIC SERIES ON *Scholarly Communications in the Digital Age*

Editor: **Dave Nicholas**

There are many challenging and strategic issues confronting the field of scholarly communications. Indeed, the field is in a transformative state and, as a consequence, the way science is conducted and evaluated is going to change. Open science, alternative ways of measuring impact and reputation, new methods of peer review, crowdsourcing, social media and online communities are among the many things driving change. Given the scale and speed of change, researchers face difficulties keeping abreast of these changes and identifying those that have significance for them. This thematic series aims to provide the necessary help and especially so for young and early career researchers who are finding their way in the dynamic world of scholarly communications.

All submitted papers will be subjected to our standard independent peer-review. Authors should specify 'Scholarly Communication' in the cover letter. Prospective authors for MiniReviews or Commentaries must contact the Editor in advance.

For instructions for authors please see the
FEMS Microbiology Letters journal page:
